- **Testing Methodology** : Waterfall, Agile Methodology
- **Bug Tracking Tools** : VSTS , JIRA, Huboard

Education

- **Bachelor of Technology** in IT from **Prakasam Engineering College, Kandukur** in 2018

Employment

- Working as a **Software Test Engineer** in **GVS Infotech Pvt Ltd** from 2019 April to the till date

Projects

Project 1

Title : Memorize - Journal, Diary
Client : Fair Apps Global
Team Size : 5
Environment : Android SDK
Testing Approach : Manual Testing(**Mobile Testing**)
Role in the project : QA Tester

Project Description : This is a journal/diary application available for Android phones. Our daily journal app will keep track of every chunk of your memory in a convenient and secure way... and it's versatile too. It can be your calendar journal, memory journal, travel journal and it's great for both men and women. The app has been available in the Play store since November 2018.

Responsibilities

- Reviewing the requirements and identifying the scenarios
- Creating and executing test cases
- Send weekly MOM to the client
- Handling client calls and clarifying the doubts
- Performing smoke tests and even regression testing
- Have to verify in different mobile devices using emulators
- Reporting the bugs in Huboard and linking the bugs to test cases
- Prepared automation scripts for the common functionalities using selenium (java)
- Maintaining the Project Documentation and Process Compliance related documents for Process Audit

Project 2

Title : Trainingz World
Client : Trainingz World
Team Size : 6
Environment : .NET
Testing Approach : Manual Testing(**Mobile Testing**)
Role in the project : QA Tester

Project Description : Trainingz World is a workplace training market with engaging video-based training at prices that any business could afford. Today, Trainingz World continues to release award-winning courses that encourage real learning through modeling good behavior and demonstrating positive examples that tell the truth about what harassment looks like in the real world.

Responsibilities

- Reviewing the requirements and identifying the scenarios
- Creating and executing test cases
- Send weekly MOM to the client
- Handling client calls and clarifying the doubts
- Performing smoke tests and even regression testing
- Have to verify in different mobile devices using emulators
- Reporting the bugs in Huboard and linking the bugs to test cases
- Prepared automation scripts for the common functionalities using selenium (java)
- Maintaining the Project Documentation and Process Compliance related documents for Process Audit

Project 3

Title : Application Tracking System

Client : Fair Apps Global

Team Size : 4

Environment : Windows

Testing Approach : Manual Testing

Role in the project : QA Tester

Project Description : Applicant tracking software (ATS) is a database of job applications and applicants with easy tracking and management of the recruitment process. Application tracking software is used by all sizes of organization to track, manage, and communicate with a large number of candidates to automate the recruiting process.

Responsibilities

- Reviewing the requirements and identifying the scenarios
- Creating and executing test cases
- Send weekly MOM to the client
- Handling client calls and clarifying the doubts
- Performing smoke tests and even regression testing
- Have to verify in different mobile devices using emulators
- Reporting the bugs in Huboard and linking the bugs to test cases
- Prepared automation scripts for the common functionalities using selenium (java)
- Maintaining the Project Documentation and Process Compliance related documents for Process Audit
