2020	**SRM Institute of Science and technology** B.tech (U.G) 70%

PROJECTS

IOT Based Monitoring and Controlling Smart Irrigation System Using Arduino

This project purposes and demonstrate an economical and easy use Arduino based controlled Irrigation System.Designed systems deals with various environmental factors such as moisture,temp and amount of water.Used sensors like water flow sensor,temp sensor and soil moisture sensor which allows user to control irrigation pumps and sprinkles from far distance.

Android application for Music,Videos and Books

The objective of this project is to develop an app which helps user to use more than one application in just one app. It was basically a combination of reading,listening to music and to watch. The user does not need to download apps for each of them. Used android Studio and visual studio.
